

Heat & A/C Filter Replacement¹

It is your responsibility to replace your A/C filter at least once per month. Failure to do so results in the filter collecting a wall of dust that the motor is trying to breathe through. This results in unnecessary wear and tear on the motor itself and a higher monthly electric bill for you.

It is imperative that you maintain replacement for your home's A/C filter. Also, the filter cover (grate) should be kept clean on a continual basis (at least once per month). Please do not place any furniture in front of the A/C filter intake.

Should your central heat and A/C unit fail and we find that a dirty filter is the cause, you may be charged for the call.

Keep your thermostat on a constant setting between 72° - 78° for a comfortable temperature inside your home. With extreme heat in the summertime, your A/C unit is trying its best to keep you comfortable. Do your part to make your A/C unit comfortable.

If you have any questions, please call us at 843-760-5280.
